ANNUAL REPORT

OF THE

MEDICAL DEPARTMENT

FOR THE YEAR

1914.

CHAPTER I.

VITAL STATISTICS.

Estimated Population.—The estimated population of the Colony at the end of 1913 was 23,777, at the end of 1914 it was 24,141, an increase of 364.

Annexure I, shows the number of arrivals and departures from the Colony, and the number of births and deaths during the year.

Birth rate.—The total number of births registered during the year was 709 being 29·36 per thousand of the estimated population less than 1913, when it was 32·72.

Death rate.—The total number of deaths was 372 giving a mortality of 15·36 per thousand, the death rate is about the same as that of 1913.

There were 113 deaths of children under 5 years of age and of these 61 were under one year of age.

CHAPTER II.

METEOROLOGICAL STATISTICS.

Mean Temperature.—The mean temperature for the year was 80·5 higher than last year when it was 79·7.

The hottest month was the month of May, and the coolest August. January and December were the wettest months of the year.

Rainfall.—The total amount of rain that fell during the year was 105·72 inches, this is about the average. The rainfall for 1912 was 105 inches, whilst in 1913 only 67·31 inches.

August this year was the driest month, with a fall of only 0·75 inches. On the 6th October 5·68 inches were recorded.

Winds.—The moonsoon blew with an average force during the year.

Annexure II shows the monthly temperature, rainfall and deaths.

CHAPTER III.

DISEASES PREVALENT DURING THE YEAR.

There were no epidemic diseases during the year.

Venereal Diseases.—There is still a great deal of venereal disease in the country, during the year a committee of all the Government Medical Officers was formed and the best means

of endeavouring to mitigate this evil were discussed. As the result of this it was decided to give greater facilities to those who were infected to obtain treatment, and educational pamphlets were printed for distribution amongst infected people.

It is hoped that by these means the prevalence of this class of disease may be reduced.

Dysentery.—Most excellent results continued to be obtained from the use of emetine in the treatment of Dysentery.

Ankylostomiasis.—There is still a considerable amount of this disease in some of the country districts, a Committee was appointed by His Excellency the Governor to report on this disease. Certain sanitary measures were recommended by this Committee but it was not possible to carry them out last year on account of the expense involved.

Chiggers.—Some of the Outlying Islands are still infected with chiggers, and in spite of precautions taken a few cases appear in Mahé from time to time, but I do not consider there is any fear of serious affection.

CHAPTER IV.

STATE OF TOWN OF VICTORIA.

The campaign against rats was continued in the town of Victoria with success, 2,627 rats were accounted for.

The general sanitary condition of the town was satisfactory.

CHAPTER V.

REPORTS OF THE ASSISTANT MEDICAL OFFICERS.

Owing to the departure of Dr Jewell, the Assistant Medical Officer of the Praslin district to British East Africa, he having applied for active service with the troops no report from Praslin is available for 1914.

The Assistant Medical Officer, South Mahé, in his report deals with the prevalence of venereal disease and of Ankylostomiasis in his district both of these diseases have been dealt with above.

CHAPTER VI.

VACCINATION.

The vaccine supplied continues to give good results.

	Victoria Hospital				South Mahé			
First time...	381	189	
Second time	9	—	
Third time	2	—	
Unsuccessful	1	—	
			<hr/> 393				<hr/> 189	

The lymph is received monthly and is kept on ice.

CHAPTER VII.

QUARANTINE.

The Quarantine Station was used on several occasions during the year chiefly by deck passengers of the British India boats coming from Bombay.

Much needed improvements were made during the year to the second station, but it was not found possible to erect a third station as was hoped.

CHAPTER VIII.

HOSPITAL AND DISPENSARIES.

Inpatients.—The total number of inpatients treated in the Victoria Hospital was 528 ; 27 less than in 1913.

Outpatients.—The total attendance of the outpatient department was 1171 ; a decrease of 70 for that of 1913.

Hospital improvements.—A great improvement was made in the hospital by the erection of a new building above the woman's ward to provide private accommodation for women. The building provides two private first class and a second class ward containing two beds.

Pharmacy.—Great structural improvements were made in the Government Pharmacy, the whole space which was formerly used both as Pharmacy and Office was arranged as a Pharmacy, and the Offices were removed to the upper storey of the building which upper storey was previously used as a house ; this arrangement not only provides ample room for the Pharmacy and Offices but also considerable extra store room.

Maternity Home.—Excellent work was done at this institution, the total number of cases admitted was 194 and the number of babies born was 161.

The number of cases requiring instrumental delivery was six. There were eight twin-births.

There were one case of ruptured tubal pregnancy. The patient recovered after operation.

Staff.—Dr M. S. Power, the Assistant Medical Officer and Visiting Magistrate, resigned his appointment.

There were no other changes.

J. B. ADDISON,

Chief Medical Officer.

Seychelles,
23rd February, 1914.

ANNUAL REPORT
OF THE
ASSISTANT MEDICAL OFFICER.
SOUTH MAHE
FOR 1914.

—————(o)—————

Twelfth Annual Report.—I have the honour to forward my twelfth annual report on South Mahé District First and Second Divisions.

Health of the District in 1914.—I am pleased to report that the health of the District was good, there was no contagious or infectious diseases noted during the year. The disease of Chiggers is not yet stamped out in certain quarters it appeared to be endemic especially high up in the mountains, in the plateau it has disappeared. Ankylostomiasis with its attendant anæmia is still common, venereal disease especially Syphilis seems to have increased, and as usual children suffer a good deal from intestinal parasites and gastro-enteritis due to improper feeding.

Vital Statistics.—As in past years I have attached tables showing a comparison of births, deaths, still-births, and marriages, for a period of five years, 1910—1914. None of these tables call for special comment except that the death rate is 9·57 per thousand, and there may be a fallacy in this, due to the facts that serious operations can now be quickly transferred to the Hospital at Victoria, and if they die while in hospital the death is registered as appearing in Victoria instead of the South Mahé District. The hand ambulance has been most useful during the year, it is employed for all serious cases for the general or Maternity Hospital at Victoria, and has had to be requisitioned several times each month.

Rate per 1000—births, deaths, marriages, &c.—I have estimated the population of the District on the 31st December 1914 at 4700 this gives a birth rate of 33·82 per thousand, a death rate of 9·57 per thousand, a still-birth rate of 3 per thousand and a marriage rate of 4·25 per thousand. The still-birth rate is unusually high, I think it may be attributed to an increase of syphilitic and venereal diseases among the population.

Principal diseases causing death in 1914.—The principal diseases causing death in 1914 are Endocarditis 5, Senile decay 6, Pulmonary Tuberculosis 2, Tubercular Peritonitis 2, Pernicious Anæmia 2, Dysentery 2, and Infantile Marasmus 2.

ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT, LUNATIC ASYLUM.

FOR THE YEAR 1914.

————(o)————

Eighth Annual Report.—I have the honour to forward my eighth annual report on the Anse Royale Lunatic Asylum.

Health of the inmates.—All the inmates during the year enjoyed good health and this applies especially to the male side. In the female side there are a good many old women, that have gone on to a state of dementia. With the good food and hygienic surroundings they live a good many years longer than if they were maintained with their families.

In my report of 1913, I pointed out that there would be an increase in numbers due to this factor, we are now filling up after eight years with a number of chronic males and females that are incurable, and all going on to dementia. This will necessitate in a few years an increase in accommodation, at present there is no pressing necessity, but the wards with 30 patients (15 males and 15 females) may be considered full. At present we have in the Asylum 12 males and 14 females. It looks as if the increase will be in the female side, and extension has been provided for in the original building.

Upkeep of Asylum.—The average number of patients for the year was 24, the daily cost for maintenance per head was 40 cents or Rs 12.40 per month. We had during the year four paying patients who have contributed for the year the sum of Rs 847.50 towards their cost of maintenance.

Attached to this report in Appendix D is a table showing the number of patients for each month their cost, and the amount contributed by paying patients.

Amount voted maintenance of Lunatic AsylumRs 4,500 ...
Expenditure maintenance of lunatics, Expenditure

Total cost of Asylum for 1914.....	7,066	72

Dieting.—The contractor gave satisfaction during the year, the food was of good quality and was well up to the standard of rations contracted for.

Admissions and discharges.—Eight new patients were admitted, 5 males and 3 females. There were discharged one female recovered, one relieved and there died one male and two females. There was one case of second admission during the year and on the 31st December there were 25 patients in the Asylum, 12 males and 13 females.

Since the Asylum was opened in 1906 there were admitted 67 patients up to 31st December 1914, during that period 20 patients were discharged as cured, 3 as relieved, 1 not improved, 18 died, the recovery rate is 29·85 per cent.

In Appendix B attached is a table showing the admissions, discharges and deaths for each year from the opening of the Asylum, and in Appendix A the admissions, discharges, and deaths for the year.

Conduct of Attendants.—There was no change in the Male Department, one female Attendant resigned and one probationer was appointed in the female side. One female Attendant has passed the examination for promotion to second class and has been promoted from 1st January 1915. The conduct of attendants during the year was satisfactory.

Amusements.—As in past years various means are taken to keep the patients amused and to make them comfortable and happy, there is a weekly dance, and weather permitting walks along the neighbouring hills. In the wards games such as cards, dominoes, draughts, &c., are provided and there is a small supply of illustrated journals given by friends of the Asylum.

JOHN THOS. BRADLEY, M. D.

Medical Superintendent,

Lunatic Asylum.

10th February, 1915.

APPENDIX A.
